# VirtualMerchant Mobile

Built on Experience You Can Trust

A mobile solution from an experienced, full-service payments provider.

Benefits at a Glance

- Works with multiple mobile devices to provide freedom of choice regardless of wireless provider
- Supports anytime-anywhere processing for mobile environments including card-present and card-not-present
- Accomodates an unlimited number of mobile devices to support businesses of any size

Now you can accept payments without boundaries and add incremental value with mobile POS acceptance, while leveraging all the benefits of Elavon's leading payment gateway, including extensive reporting and the flexibility to adapt your payment solution as your business grows.

Elavon's VirtualMerchant Mobile is a secure, complete payment solution that transforms mobile devices into terminals, allowing you to accept payments quickly and securely anywhere, any time without a major investment of money or effort. Our secure mobile solution is a natural extension of our full service offerings that builds on over 20 years of industry experience by providing flexible, secure and scalable payment solutions to businesses of all sizes.

VirtualMerchant Mobile is an innovative offering for businesses of any size that want more than just a mobile payment solution from their payment providers.

Elavon

VirtualMerchant Mobile

Simple and Secure

VirtualMerchant Mobile leverages a secure, hosted environment with quick upgrades and end-to-end connectivity while eliminating the cost and complexities of a third-party provider. Plus, Elavon is focused, stable and trusted in the marketplace and is backed by 20 years experience in the industry allowing us to support our mobile solution with five key elements:

Security – In addition to encrypting card data at the time of swipe through Magtek iDynamo and BulleT card readers, all payment information is immediately sent to and stored in Elavon's secure, hosted environment to ensure security of cardholder data and to provide added protection for you and your customers.

Connectivity – Works with an array of mobile device types, regardless of carrier, to ensure freedom of choice. A selection of flexible card readers support card-swiped transactions through all supported mobile products.

Flexibility – Supports anytime-anywhere processing for mobile environments including card-swiped or key-entered transactions and is scalable to support an unlimited number of mobile devices for businesses of all sizes.

Visibility – Delivers more than just a mobile solution, but also provides the full service, trusted reporting and capabilities of our secure hosted payment gateway, which includes detailed records of reporting for up to 12 months of transaction activity.

Simplicity – It's efficient and cost effective, allowing you to utilize existing hardware, technical infrastructures and communications providers to enable mobile commerce and accept most card payments.

Made for Small Business

With VirtualMerchant Mobile you can utilize existing hardware, technical infrastructures and communications providers to enable mobile commerce and accept most card payments. It supports Purchase and Authorization Only transactions and works with Smartphone devices including most Apple®, Blackberry® and Google® Android mobile devices.

Quick and easy set up and configuration process includes downloading the VirtualMerchant Mobile App from the relevant App Store and entering account configuration credentials which are provided by Elavon.

Once your Smartphone is configured, you can accept key-entered transactions or swiped transactions can be accepted with the addition of a card reader that encrypts card data at the time of swipe to ensure security. Elavon supports multiple readers for multiple form factors.
